Veggr-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed veggr-D is composed mostly of two Veggr homology domains (VHDs) bound by non-covalent interactions.

SIMILARITY: BELONGS TO THE PDGF/Veggr FAMILY OF GROWTH FACTORS.

RA Yamada Y., Hirata Y., Nezu J., Shimane M.;

RI Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.

CC :- FUNCTION: Growth factor active in angiogenesis, lymphangiogenesis

CC and endothelial cell growth, stimulating their proliferation and

CC migration and also has effects on the permeability of blood

CC vessels. May function in the formation of the venous and lymphatic

CC of differentiated lymphatic endothelium in adults. Binds and

CC of differentiated lymphatic endothelium in adults. Binds and

CC :- SUBCHLULAR LOCATION: Secreted (By similarity).

CC :- SUBCHLULAR LOCATION: Secreted (By similarity).

CC :- FUM: Undergoes a complex proteolytic maturation which generates a

CC variety of processed secreted forms with increased activity toward

CC VEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer

CC VEGF b is composed mostly of two VEGF homology domains (VHDs)

CC Dinked by disulfide bonds before secretion. The fully processed

CC VEGF-D is composed mostly of two VEGF homology domains (VHDs)

CC --- SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.

VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity). SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 ASELGKSTNTFCKPPC 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lung, liver, skeletal muscle and klaney.

PTH: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward verset. The fully processed form could activate VEGFR-2. But only the fully processed form could activate VEGFR-2. The fully processed form could activate VEGFR-2. Before secretion, a cleavage occurs between arg-227 and ser-228 producing an heterotetramer. The next extracellular step of the processing removes the N-terminal propeptide. Finally the mature VEGF-C is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).

SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Expression detected in mesenchymal cells of postimplantation embryos, particularly in the regions where the lymphatic vessels undergo sprouting from embryonic veins, such as the perimetanephric, axillary and jugular regions, and in the developing mesenterium. Expressed in adult heart, brain, spleen, lung, liver, skeletal muscle and kidney.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in angiogenesis of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-2 (Flk1) and VEGFR-3 (Flt4) receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US8112; AAB46707.1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             runction. Growth factor active in angiogenesis, and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in angiogenesis of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGFR-2 (FIkl) and VEGFR-3 (FIt4) receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bonds. Before secretion, a cleavage occurs between arg-227 and ser-228 producing an heterotetramer. The next extracellular step of the processing removes the N-terminal propeptide. Finally the mature VEGF-C is composed mostly of two VEGF homology domains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   variety of processed secreted forms with increased activity toward VEGFR-3, but only the fully processed form could activate VEGFR-2. VEGFR-C first form an antiparallel homodimer linked by disulfide

"prediction from sequence comparisons of residues of factor H involved "prediction from sequence comparisons of residues of factor H involved in the interaction with complement component C3b.";

Biochem. J. 315:523-531(1996).

1- FUNCTION: Factor H functions as a cofactor in the inactivation of c3b by factor I and also increases the rate of dissociation of the C3b bbb complex (C3 convertase) and the (C3b)MBB complex (C5 convertase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bos taurus (Bovine).

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein search, using sw model

Disulfide-bond
                                                        Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cerebrovascular accident, post-angioplasty restenosis, head, heat or coltrauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular infection. The peptides are also used to modulate vascular permeability accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The momomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. Cor -D and chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinonathy.

                                                                                                                                                                                                                                                                                                                                      hormone related anglogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides (comprising 2 linked deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or cold hormanna-related angiogenesis dues financed covery cerebrovascular accident, when the condition of the liver, excessive hormanna-related angiogenesis dues financed to the liver, excessive
                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                    diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents a dimeric bicyclic peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 26; Page 49; 102pp; English.

cc a peptide loop fragment from an exposed loop of a growth factor protein cc and cyclising the peptide by oxidising the cysteine residues. The cc monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked cc monocyclic peptides) and a cyclic peptide with at least one amino acid cc monocyclic peptides) and a cyclic peptide with at least one amino acid cc meovascularisation or lymphangiogenesis in a mammal with a condition cc characterised by angiogenesis, periode with at least one amino acid cc rehe condition is diabetic retinopathy, psoriasis, arthropathy, cc remangioma, vascularised malignant or benigh tumour, post-recovery cc hemangioma, vascularised malignant or benigh tumour, post-recovery cc retrauma, substance-induced neovascularisation of the liver, excessive cc infection. The peptides are also used to modulate vascular permeability in amammal (the mammal has a condition characterised by fluid or brain. The peptides are used to image blood vessels and lymphatic cor are also used in combination with an anti-inflammatory agent, to treat a cc chronic inflammatory and in reprimeral lymphatic corporation inflammatory and arthritis neoriasis and cc corporation in anoti-inflammatory agent, to treat a cropic inflammation accidently repumbatic archivity induced by VEGF, VEGF-C or -D and creation inflammatory agent, to treat a cropic inflammation accidently repumbatic and arthritis neoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VEGF based bicyclic dimeric peptide #7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diabetic retinopathy; chronic inflammation; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAU04547 standard; Peptide; 17
                                                       The sequence represents a dimeric bicyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides, and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, meovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery hemangiogenia, accident nost-raccional setuposis, head, heat or cold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VEGF based bicyclic dimeric peptide #4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAU04547
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diabetic retinopathy; chronic inflammation; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diabetic retinopathy; chronic inflammation; cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disulfide-bond

                                                                                                                                                                                                                                                                                                                                                                                                                diabetic retinopathy; chronic inflammation; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                              neovascularisation; lymphangiogenesis; psoriasis; tumour; diabetes induced neovascular sequelae; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; VEGF; vascular endothelial growth factor; anglogenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hormone related anglogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psorlasis and diabetic variances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VEGF based bicyclic dimeric peptide #8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  26-SEP-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAU04551;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by annionacia monocyclis in a mammal with a condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hormone related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. VEGF-C or 'D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            characterised by anglogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angloplasty restenosis, head, heat or contrauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Achen MG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                oxidizing the cysteine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents a dimeric bicyclic peptide of the invention

cc whose 3-dimensional structure is modelled on the expose loop of human CC wEGFD (vascular endothelial growth factor). The invention relates to a CC method of producing a monomeric monocyclic peptide by a measuring CC method of producing a monomeric monocyclic peptide by a measuring CC and cyclising the peptide by oxidising the cyclic peptides. The CC and cyclic peptides, dimeric bicyclic peptides (comprising 2 linked CC monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anjogenesis. CC characterised by angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition CC characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive crauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver in fection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to induced vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. Or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and content of the peptides are also used to mathritis, psoriasis and content of the peptides are used to interfere with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and

Human VEGF-D amino acids Vall01-Thr 173.

```
CC amino acids Vali01-Thr 173, used together with the C-terminal 23 CC residues of VEGF to make a hybrid theoretical molecule for 3 CC dimensional modelling. The sequence is used in a method of producing CC a monomeric monocyclic peptide by a measuring beta-beta carbon separation CC distances on opposite antiparallel strands of a peptide loop fragment CC peptide with at least one amino acid deleted prior to cyclisation are CC used to interfere with anglogenesis, neovascularisation or lymphangiogenesis, neovascularisation or lymphangiogenesis, neovascularisation or lymphangiogenesis. The condition characterised by cardinate retinopathy, psoriasis, arthropathy, hemangioma, vascularised CC post-angioplasty restenosis, head heat or cold trauma, substance-induced dysfunction, diabetes induced neovascular sequelae, or chronic liver infection. The peptides are also condition characterised by finid accumulation in peripheral limbs or in condition characterised by finid accumulation in peripheral limbs or in condition characterised by finid accumulation. The peptides are used to interfere with at least one biological activity and interfere with at least one biological activity can be perioded are used to interfere with at least one biological activity anti-inflammation with an combination with

The specification describes a human cell line CC which stably expresses VEGF-D, or fragments/analogues having VEGF-D CC which stably expresses VEGF-D, or fragments/analogues having VEGF-D CC which stably expresses VEGF-D, or fragments/analogues having VEGF-D CC antibodies activity. VEGF-D antagonists, e.g. antisense nucleic actids CC or triplex DNA, VEGF-D variants or antibodies (especially chimeric CC antibodies), are useful for the treatment or alleviation of malignant CC estimulating amounts of VEGF-D can be administered to enhance the CC stimulating amounts of vEGF-D can be administered to enhance the healing CC estimulating amounts of vEGF-D can be used to treat lymphedema.

CC stimulating amounts of vEGF-D and be used to treat lymphedema.

CC endothelial proliferation stimulating amounts of VEGF-D can treat scleroderma. Vascularisation stimulating amounts of VEGF-D can be used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are useful for detecting tumours expressing VEGF-D. Fully-processed VEGF-D can be used to stimulate at least one VEGF-D bloactivity chosen from can be used to stimulate at least one VEGF-D and differentiation controlled the controlled and differentiation and the controlled controlled contro

C Crayments thereof, which is specifically reactive with the truncated cumulant vege-b, which is specifically reactive with the truncated cumulan vege-b, and methods of preparing the antibody. The antibody of the cumulant veger-b, and methods of preparing the antibody. The antibody of the cumulant veger-b, and wederes with the binding of veger-b to the veger receptors of these receptors and additionally is not reactive with veger-c. The cumulant veger-b to treat disorders associated with veger-c. The cumulant veger-b compared bility, endothelial cell proliferation, angiogenesis, permeability, endothelial cell proliferation, and endothelial cell cumulantion, especially cancer, diabetic retinopathy, psoriasis, and contropathies. The antibody may also be used to treat fluid accumulation arthropathies. The antibody may also be used to treat fluid accumulation arthropathies. The antibody may also be used to treat fluid accumulation and antibody may also be used to treat fluid accumulation and additionally be used to detect veger-b and may be used to image lymphatic vegeral vegetal v

in the lung and/or gaseous exchange between the lungs and the blood permeability in cases of cardiac insufficiency, to improve blood circulation to the heart and O2 gas flow and gaseous exchange in chronic obstructive airway disease, Or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGS-D in cancer blopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be used involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be used
                                                                                                                                                                                                                                                                                                          The sequence is that of human breast vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or macrois workers between the lung discretization.

CC ameliorate disease and to detect diseases, or susceptibility, by
CC detecting mutations or the presence or amount of anglogenic protein
CC expression. Particularly they are used to stimulate wound healing,
CC growth of damaged bone and tissue, and for repair of vascular tissue,
CC coronary disease. Antagonists of the sequences are used to inhibit
CC angiogenesis in tumours and to treat inflammation (where associated with
CC arthritis or psoriasis. Agonists are also useful for stimulating
CC (lymph)angiogenesis. The proteins are also useful for stimulating
CC (lymph)angiogenesis. The proteins are also useful for stimulating
CC (including agents (potential therapeutic agents) and to raise antibodies.
CC purification and targeting of proteins for in vivo or in vitro diagnosis
CC (including imaging) or for therapy (including when linked to e.g. a label
CC residual disease or haematopoletic progenitor/stem cells. It is also
CC range of other disorders, e.g. autoimmune diseases; allergy; cancer;
CC neurodegeneration, also as chemotactic agents or for stimulating
CC regeneration of the nervous system are

                     The present sequence represents a human zvegf2 growth factor encoded by the zvegf2 cDNA which was isolated from a human heart cDNA library zvegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells zvegf2 is claimed to be useful for stimulating the smooth muscle cells.
                                                                                                                                                                                  New isolated vascular endothelial growth factor - used to develop products for treating e.g. wounds, burns, myocardial infarction, tumours, psoriasis, arthritis, restenosis or organ transplants
                                                                                                                                                                                                                                                                                                                                                                                                                                          18-SEP-1997;
06-DEC-1996;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               venous stasis ulce
angiogenic effect;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human zvegf2 growth factor; mitogen; fibroblast;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tissue. zvefg2 is particularly claimed to be useful for the treatment of full-thickness skin wounds, including venous stasis ulcers and diabetic ulcers. The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. Antagonists against zvegf2 can be used to block its mitogenic, chemotactic and angiogenic effects. The antagonists may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        wascular endothelial growth factor; VEGF-D; angiogenesis; modification; acceleration; wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stenosis; coronary artery disease; inhibition; cancer; treatment; colonary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive aliway disease; intestinal malabsorptive syndrome; blopsy; metastatic risk; intestinal malabsorptive syndrome; blopsy; metastatic risk;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         therefore be useful for reducing growth of solid tumours by inhibiting neovascularisation of the developing tumour or by directly blocking tumour cell growth, in the treatment of diabetic retinopathy, psoriasis,

                                                                                                                                                                                                                                                                                                                                                        CC The sequence is that of human lung vascular endothelial growth factor CC (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis CC in wound healing, tissue or organ transplantation, or to establish CC collateral circulation in tissue infarction or attends; in CC the treatment of cancer or of diabetic retinopathy. It can also be CC used in the treatment of lung disorders to improve blood circulation CC in the lung and/or gaseous exchange between the lungs and the blood CC stream or to improve blood circulation to the heart and O2 gas CC permeability in cases of cardiac insufficiency, to improve blood CC flow and gaseous exchange in chronic obstructive airway disease, CC or to treat malabsorptive syndromes in the intestinal tract. CC Quantitation of VEGF-D in cancer biopsy specimens may be useful CC as an indicator of future metastatic risk. Antagonists can be used CC for treating e.g. conditions such as congestive heart failure, CC increases in vascular permeability. The products can also be used crocked the content of diagnosis.
